

### Preparation

①

Make sure the surface is flat and clean.

②

If you want to make a pattern, we advise you to arrange it on the floor first. This way, you can adjust the pattern until you get the desired configuration.

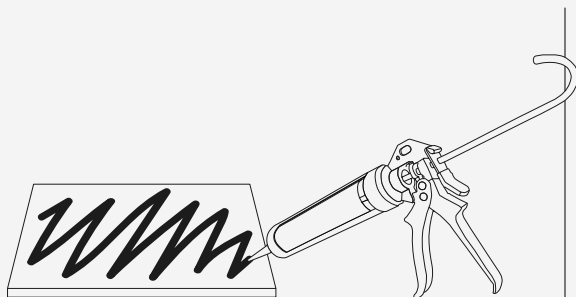

③

If needed, draw several reference markings on the wall itself.

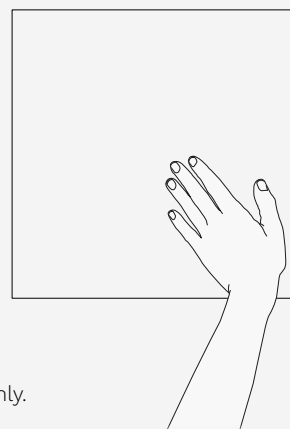

### Mounting glue

When installing PET Felt, it is advisable to use a polymer adhesive like Griffon poly max high tack. Please, read the manufacturer's instructions before the installation. Here is how to mount PET Felt tiles on the wall using the glue:

①

Apply adhesive evenly on the tile and stick it directly to the wall. You can use a level if necessary.

②

Press the corners firmly.
